Student assessment dashboard

You are to make an application to be used by teachers to keep track of students, courses and their results. Sounds familiar?

This is the only mandatory assignment before the exam.

Note: This is a group assignment. Add all members to an *Assignment Group* before delivering.

Passing percentage: 70%

Functional requirements

Students

- 10% Add new student
- 10% Edit existing student. Text search box filters students by name.
- 10% Remove student. Text search box filters students by name

Courses

- 10% Add new course
- 10% Edit existing course. Text search box filters courses by name.
- 10% Remove course. Text search box filters courses by name
- 10% Each course must have a bar chart showing the grade distribution

Grades

- 10% Add course result to student. One result per score (new results overwrite the old if they are higher)

Technical requirements

- Data is stored in Firebase

- 10% Removing a student also removes their results
- 10% Removing a course also removes all course results

The app does not require login functionality. You will work with Firebase Authentication in the main project.

Delivery

Delivery the project code as a zip here in Canvas. You will be able to fix your delivery if a TA fails your assignment before the final date. To create the zip file use this command in your git repository:

```
git archive --format=zip --output group_xx_assignment.zip main
```
