Use this tutorial [here](https://opencv.org/blog/fingerprint-matching-using-opencv/)  (<https://opencv.org/blog/fingerprint-matching-using-opencv/>) to help build a software for matching finger prints, then try to use it to match the attached UiA images!

There are two approaches (pipelines) to achieve this task, which method (approach) detection pipeline was more efficient considering speed, recourses used and accuracy! For both cases, fingerprints and the UiA image.

Use the data_check sample images, for the tests.
